## CASE STUDY

Challenge

Solution

Outcome

### CHALLENGE:

As summer fades into fall, leaves falling onto the ground are a common occurrence. As much as he enjoyed the fall breezes, Zach Wood, Knoxville, TN was not looking forward to the prospect of trying to keep his window well clear of the debris. His window well was constantly filling up with the fallen leaves from a nearby tree. The result was a weekly cleaning that required him to get down into the small space and clean it out.

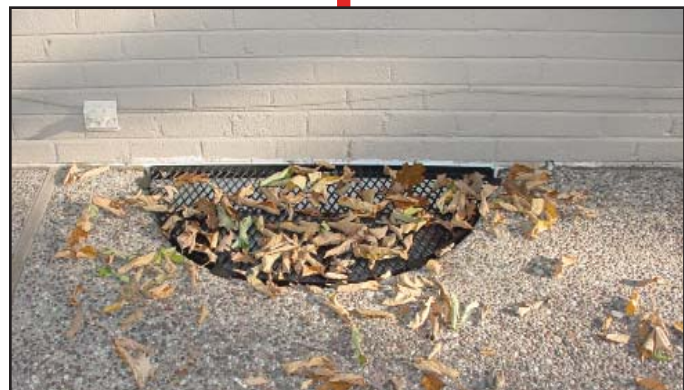

### SOLUTION:

Handi-Ramp custom manufactured a window well cover that fit Zach's specific well. Made of expanded steel, the cover had a grated pattern that keeps leaves, debris and animals out of the well. Both discrete and unobtrusive, the cover also provided easy access into the well and lots of light into the basement.

### OUTCOME:

- The cover fit snugly over the window well since it was custom manufactured to fit.
- Window well remains clear of leaves and debris during the spring and fall seasons due to the grated pattern.

*Our window well cover was one of the best investments we ever made. It has eliminated the amount of debris that falls into the well. My back thanks you!*

~ Zach Wood
